

Synergy of VSWIR and LiDAR for Ecosystem Structure, Biomass, and Canopy Diversity

Bruce D. Cook
NASA-GSFC

Gregory P. Asner
Carnegie Institution

HyspIRI Science Questions

VQ1. What is the global ***spatial pattern of ecosystem and diversity distributions*** and how do ecosystems differ in their composition or biodiversity?

VQ2. What are the ***seasonal expressions*** and cycles for terrestrial and aquatic ecosystems, ***functional groups***, and diagnostic species?

VQ3. How are the ***biogeochemical cycles*** that sustain life on Earth being altered/ disrupted by ***natural and human-induced environmental change***?

Challenges to Imaging Spectroscopy

Plant chemical signatures are influenced by canopy structure and shadows

Spectral Dependence of Leaf and Canopy Properties

Canopy gaps and shade

Leaf Angle Orientation

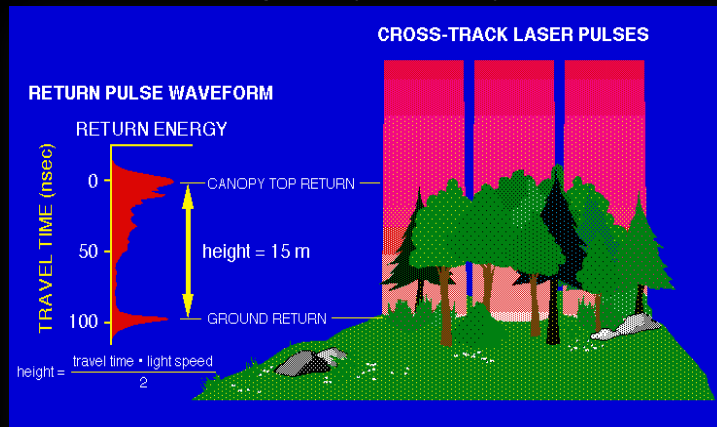

Leaf Reflectance/Chemistry

Leaf Transmittance/Chemistry

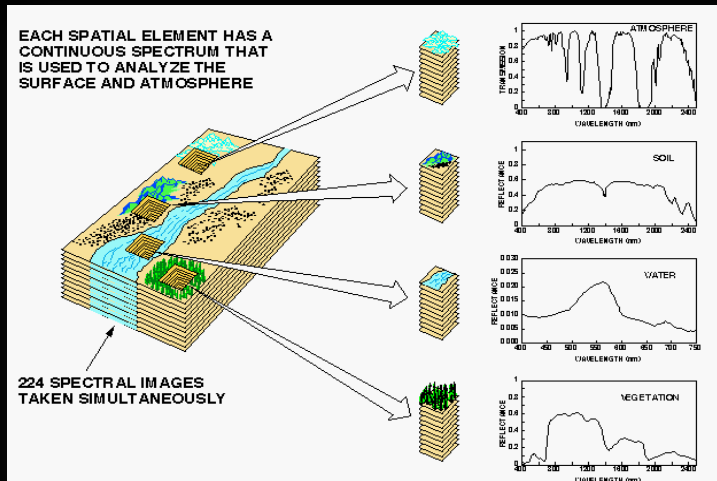

Carnegie Airborne Observatory (CAO)

3-D functional imaging of ecosystems

LiDAR for topography, canopy structure, LAI, etc.

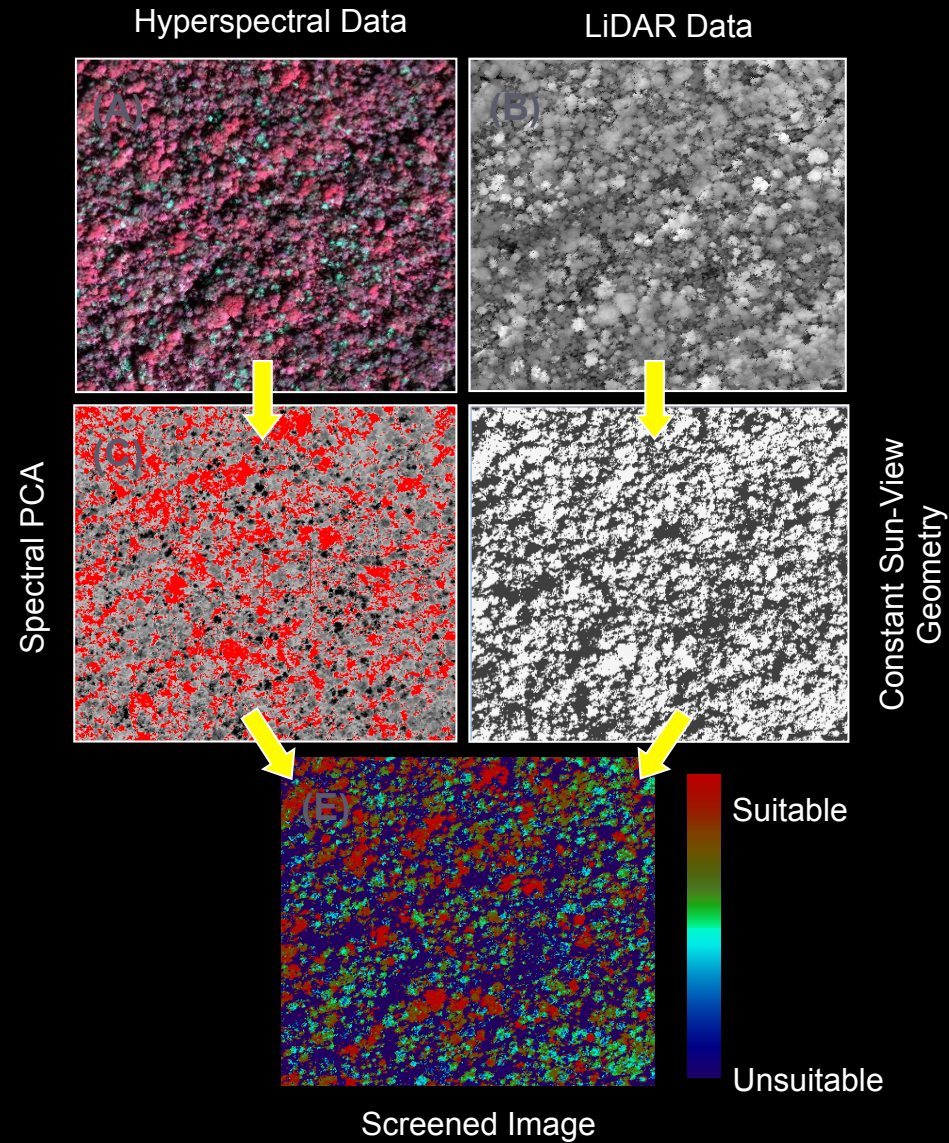

Hyperspectral for species, chemistry, etc.

Fusion for estimates of biodiversity, biomass, sun/shade fraction, habitat suitability, etc.

Carnegie Data Processing Stream

Biological Invasion Fronts

Canopy chemistry and biodiversity in tropical forest canopies

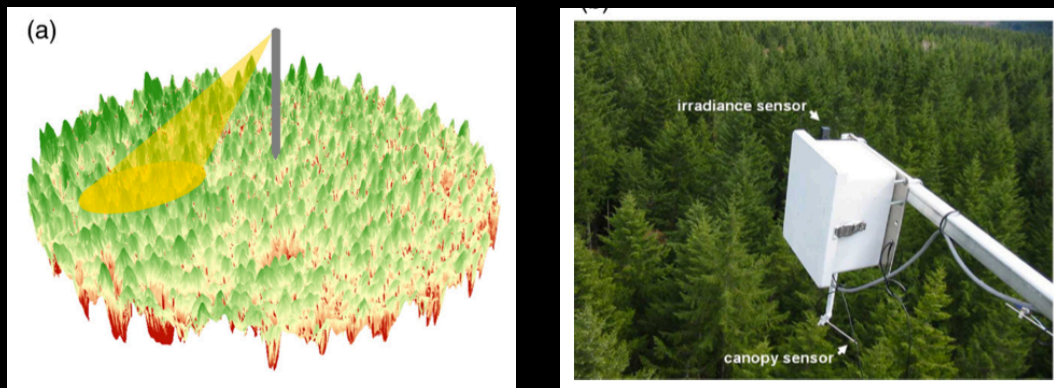

High-Temporal Tower-Based Studies

1) Thermal + LiDAR/Hyperspectral

2) Correcting hyperspectral observations for shadow fraction

Thermal + LiDAR/Hyperspectral

(Middleton, Cook, Corp, *et al.*, NASA-GSFC)

SPIE Optics Photonics, Optical Engineering plus Applications, Imaging Spectrometry, San Diego, CA August 2-6, 2009.

Hyperspectral-LIDAR system and data product integration for terrestrial applications

Lawrence A. Corp¹, Yen-Ben Cheng², Elizabeth M. Middleton³, Geoffrey G. Parker⁴
K. Fred Huemmrich⁵, Petya K. Entcheva Campbell⁵

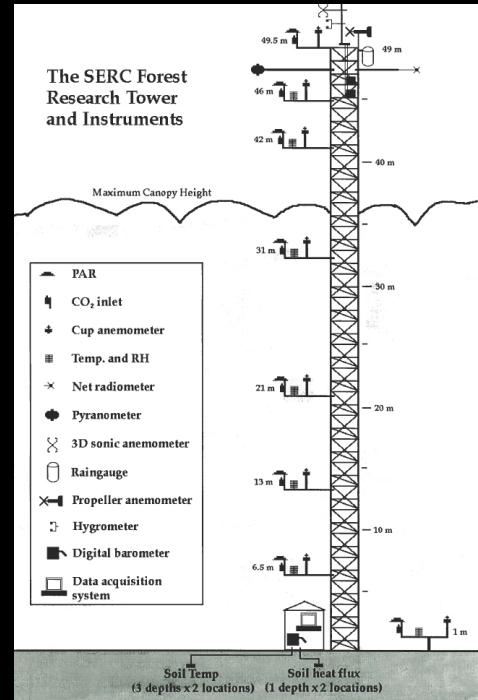

Pan-tilt mount

Thermal imager (NEW!)

Continuous Sun/Shade Measurements

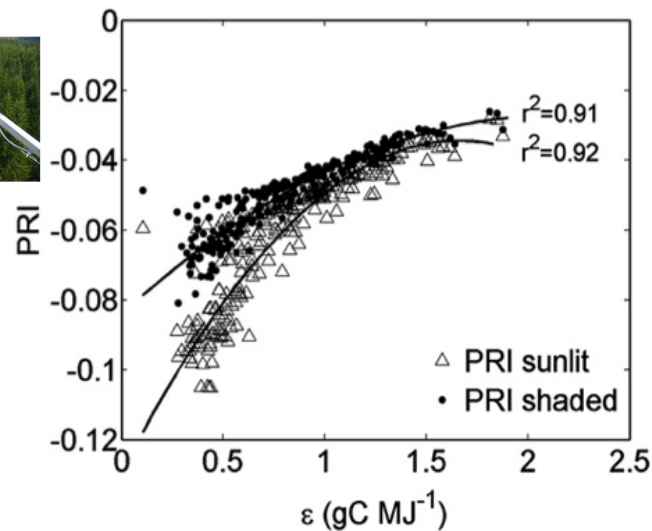

SERC Flux Tower

View Angle/Shadow Fraction Correction

(Hilker and Hall, *et al.*; Univ. British Columbia, UMBC/NASA-GSFC)

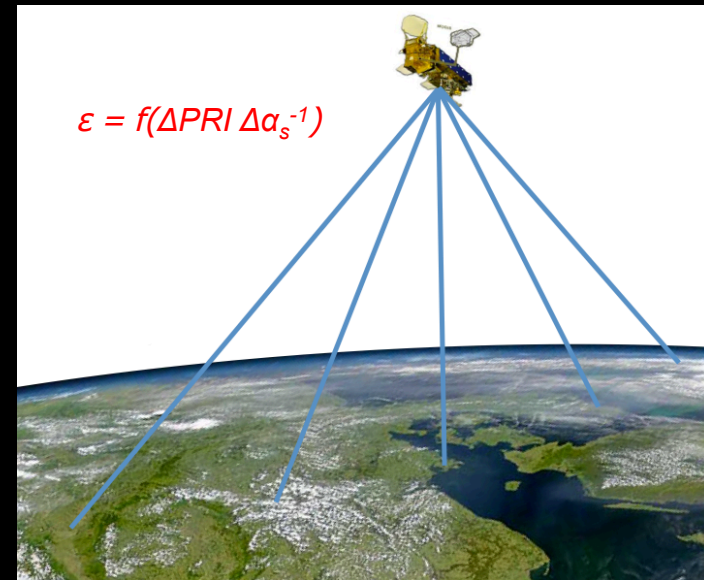

Tower Observations

PRI = Photochemical Reflectance Index

ϵ = photosynthetic light-use efficiency

Space-Based Observations

Photosynthetic light-use efficiency (ϵ) from multiple angles can be related to:

- 1) direct measurements of PRI; and
- 2) shadow fraction (α_s) derived from LiDAR or mixture decomposition.

Conclusions

Biophysical information from LiDAR and *biochemical* information from hyperspectral remote sensing provides complementary data for:

- 1) describing *spatial patterns of vegetation and biodiversity*;
- 2) characterizing relationships between *ecosystem form and function*; and
- 3) Detecting natural/human-induced change that affects *biogeochemical cycles*.
