

Integration of the PRI and fAPARchl Products for Carbon Monitoring

Yen-Ben Cheng

Elizabeth M. Middleton

Qingyuan Zhang

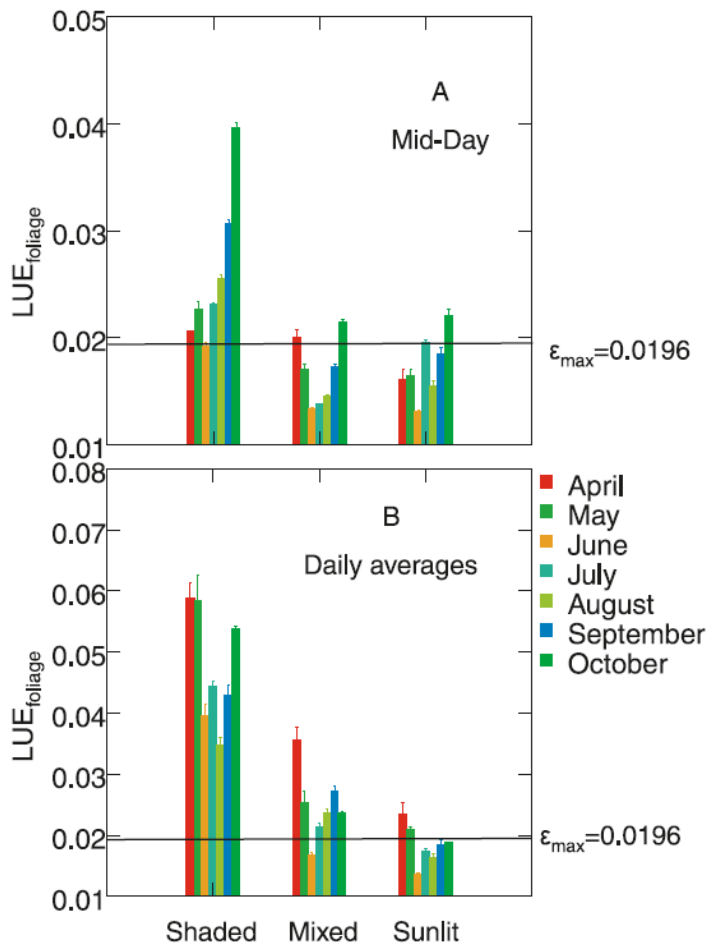

HyspIRI Science Symposium on Ecosystem Data Products

NASA Goddard Space Flight Center, May 17 & 18, 2011

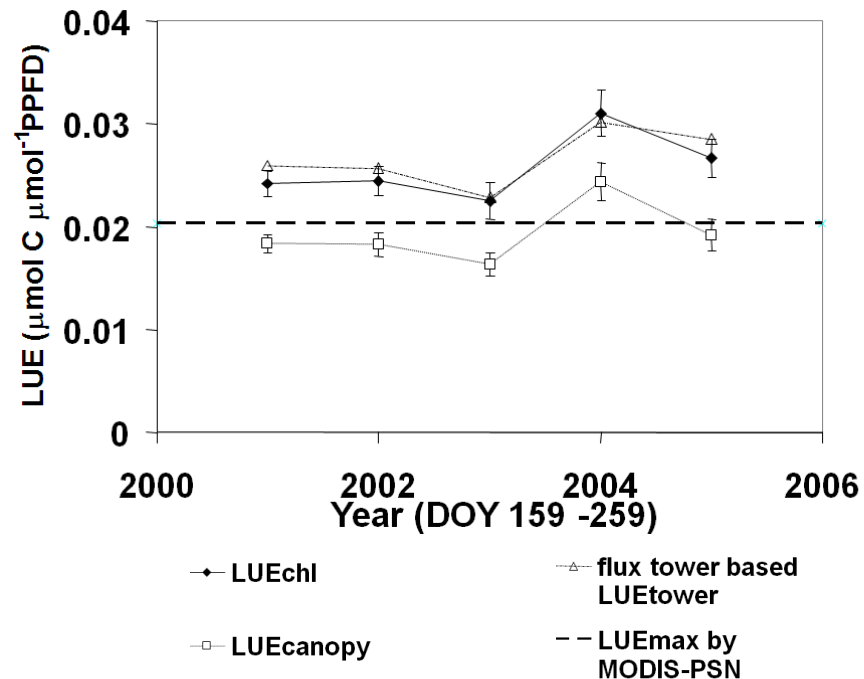

Objectives

- Two of the HyspIRI Products: PRI & fAPARchl
- $GEP = LUE \times PAR \times fAPAR$
- Photochemical Reflectance Index (PRI)
 - physiological condition: xanthophyll signal@531nm
 - correlation with LUE
- fAPARchl
 - enhanced fAPAR
 - derived from inversion radiative transfer modeling
- ?? Integration of PRI and fAPARchl: estimates of GEP directly from spectral observations

Previous work

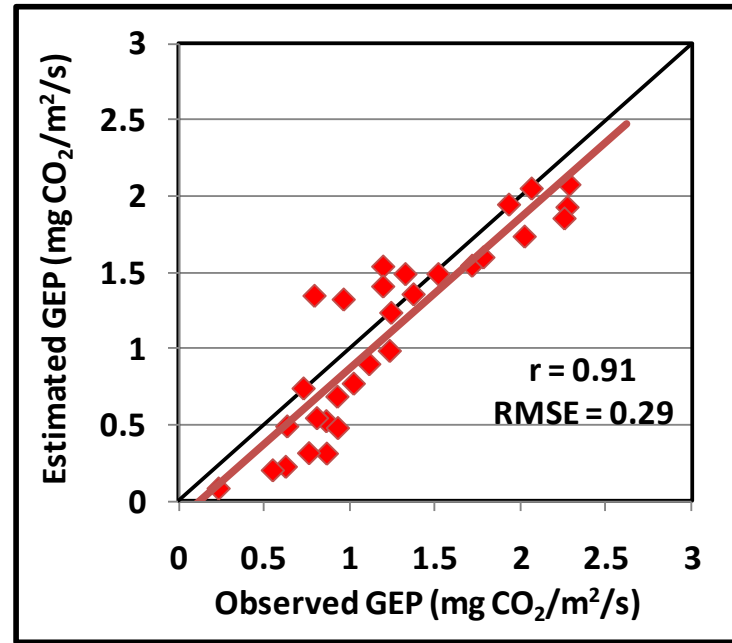

Middleton et al., 2009. *Canadian Journal of Remote Sensing*.

Zhang et al., 2009. *Remote Sensing of Environment*.

- $GEP = f(PRI, PAR, fAPARchl)$
- Start at canopy level, then scale up to imagery
- What we did: weekly field campaign, OPE3 corn field of USDA BARC, summer of 2008
- What we got: tower based CO_2 and PAR; spectral observations for corn canopies

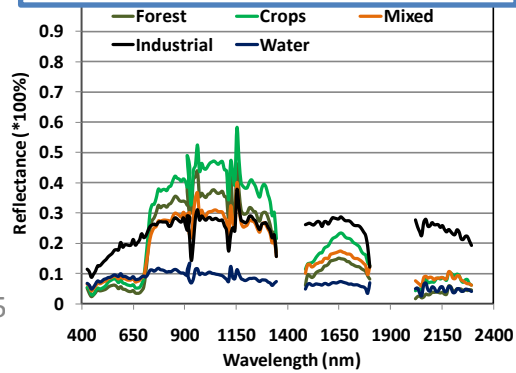

Going Regional and Global

- Initiate the process: apply what we have learned in the field to a greater scale
- Simulate HyspIRI imagery from EO-1 Hyperion & demonstrate integration of PRI and fAPARchl
- Spatial resolution → take advantage of the fine spectral and spatial resolution of HyspIRI
- A question need to ask for any product whether to use it directly or input to models
- Changes in average values due to aggregation
- **PRI & spatial resolution**

Continue What We Have Started

EO-1 Hyperion VSWIR

Greenbelt, MD

Histogram and average of PRI derived @ various scales

Hyperion imagery, August 18, 2008

Histogram and average of PRI derived @ various scales

Hyperion imagery, August 18, 2008

Histogram and average of PRI derived @ various scales

Changes in both the mean value and distribution histogram of PRI due to the increase of pixel size

Regional mean derived from 30-m PRI was 10% more compared to that derived from 960-m PRI

Comparisons of GEP at various spatial resolution

Comparisons of GEP at various spatial resolution

Summary

- Demonstration of using both the PRI and fAPARchl products for carbon monitoring and effects of spatial resolution
- Continue testing the robustness of the algorithm
- Confounding effects on PRI / PRI:LUE
- Uncertainty assessment in LUE and GEP estimates
- Various case study
- Use PRI and/or fAPARchl as model inputs
- Comparisons among various models (Cal/Val)

Thank you!!
